PRESS RELEASE

NURSE-LABS: A New European Initiative to Strengthen Nurses' Competences in Chronic Vision Care and Medication Adherence

A new European project, NURSE-LABS – Digital Training for Nurses on Chronic Vision Care and Medication Adherence, has officially launched, bringing together seven organisations from Cyprus, Italy, Greece and Poland to advance nurses' education and competence development in chronic vision care and medication adherence.

Funded by the European Union under the Erasmus+ Programme – Cooperation Partnerships in Vocational Education and Training (KA220-VET), NURSE-LABS will run from 1 September 2026 to 31 August 2028. The project is coordinated by OFTHALMOLOGIKO KENTRO PANTHEO LTD, Cyprus.

Strengthening Nursing Competence through Education, Evidence and Digital Innovation

People living with chronic vision conditions often require long-term treatment and ongoing support. Alongside clinical care, effective communication, patient education and medication adherence support are important components of chronic disease management. Nurses are well positioned to contribute to this process through their continuing interaction with patients and their role in education and care.

NURSE-LABS aims to strengthen this role by developing and validating a European competence framework for chronic vision adherence counselling which will be translated into an EQF-aligned curriculum and supported by an innovative simulation-based digital Learning Management System (LMS) ecosystem.

The project seeks to improve measurable counselling competences among nurses, strengthen their integration into Continuing Professional Development (CPD), and establish a scalable, evidence-based European vocational education and training model for chronic eye care.

From Competence Framework to Simulation-Based Learning

The project will deliver a validated European Competence Framework, modular EQF-aligned curriculum, simulation-based digital learning ecosystem and evidence from transnational pilot implementation. It will also develop a CPD integration proposal, sustainability roadmap

and policy brief and establish a European Community of Practice to facilitate continued knowledge exchange and transfer of the project's results across Europe.

A European Partnership

NURSE-LABS brings together complementary expertise in clinical care, nursing, education, research, health literacy and digital learning. The consortium comprises:

OFTHALMOLOGIKO KENTRO PANTHEO LTD (Cyprus – Coordinator); A.N.E.V Consulting Services Ltd (Cyprus); Cyprus Nurses and Midwives Association (Cyprus); Università degli Studi di Udine (Italy); Pomeranian Medical University in Szczecin (Poland); Hellenic Scientific Association of Health Literacy (Greece); and Cohesion Network 2gether (Greece). Through this multidisciplinary European collaboration, NURSE-LABS aims to connect evidence, education, simulation and clinical practice to support sustainable competence development for nurses involved in chronic vision care.

Project Identity

Title: NURSE-LABS – Digital Training for Nurses on Chronic Vision Care and Medication Adherence

Project No.:2026-1-CY01-KA220-VET-000457806

Programme: Erasmus+ | KA220-VET – Cooperation Partnerships in Vocational Education and Training

Duration: September 2026 – August 2028
